Dear Valued Customer/Partner,

The current generation of WD Purple hard drives underwent changes in model numbers earlier this year, to distinguish between OEM and distribution SKUs, and to create differentiated products for particular regions.

The change in model numbers and labels were only a marketing change, and the respective drives did not change in form, fit or function. Below is a table listing for each capacity of all equivalent model numbers. Assuming you have already qualified one of the model numbers, a corresponding equivalent model number should not require a re-qualification.

Capacity	Dahua Model Numbers	China OEM Model Numbers	China Distribution Model Numbers	Non-China Distribution Model Numbers
